Meter Log

Daily meter readings for generators, tie-ins and unit base supply

Scan to open the app

Getting started

Connect to the production

The first screen asks for a production code. Type it in and tap Connect.
The production name then shows at the top of every screen.

Install it on your phone

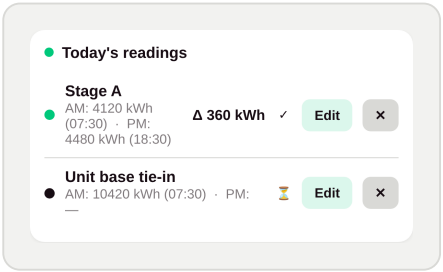

On the same screen, tap Install app, or follow the instructions shown for your phone.
Open Meter Log from your home screen from then on.

Taking a reading

1. **Pick the date**
   Today is filled in already.
2. **Choose the meter**
   Not on the list? Choose "Other / not listed" and type the name, so the next person finds it waiting for them.
3. **Enter the readings in kWh**
   Morning, end of day, or both. Enter one now and come back later for the other.
4. **Save the reading**

What your entries look like

Further down the Log screen you can see what you have saved, and tap Edit to change an entry.

⧖ An hourglass means it has not reached the spreadsheet yet.

✓ A tick means it is on the spreadsheet.

Good to know

This system is designed to work whether you have signal or not. Keep logging in poor reception, and everything you have saved syncs to the spreadsheet as soon as you are back in range or on Wi-Fi.
